

## Education

---

**University of Oxford, Mansfield College - MSc Mathematical Modelling & Scientific Computing** 2023

*Dissertation: Singular Spectrum Analysis for Time Series, working with BlackRock.*

*Projects:*

- Adaptive Optimisation Algorithms: Analysis of recent ML algorithms with an application in house pricing.
- Computational Call Pricing: Examining a neural-network based call pricing algorithm.
- Image Recolourisation: Python GUI program to recolourise images using RKHS methods for the backend.
- Battery Modelling: Construction of a model to analyse battery degradation for electric vehicles.

**University of Oxford, St. Hilda's College - BA Physics (2.i)** 2019 - 2022

**d'Overbroeck's Sixth Form** 2016 - 2018

## Skills

---

### Databases

- Worked with both graphical (neo4j) and traditional databases, using tools such as Cypher Query Language, Tableau, shellsript, awk, and sed

### Data Science

- Python and MATLAB based numerical modelling (e.g. via RK4)
- Data analysis utilising Pandas, SciPy, and Jupyter in both experimental and non-experimental contexts
- Neural networks for option pricing predictions - Analysis and implementation of optimisation methods for numerical methods and ML algorithms e.g. AdaLoss
- Machine learning and data cleaning using the Scikit-learn and XGBoost libraries to predict trade settlements
- Basic natural language processing (e.g. text sanitisation and topic modelling) using NLTK

### Computing & Development

- Java in the context of creating JUnit tests (built with Maven) for FX trade spot and tenor behaviour, utilising the Mockito framework to supplement existing in-house infrastructure
- Jira and Confluence for team organisation
- Cucumber testing to deliver features via a BDD framework
- AWS Cloud Development Kit
- Version control with Git, Bitbucket
- Unix based operating systems (Linux, OpenBSD, Plan 9)

## Experience

---

**London Stock Exchange Group** (Technology Intern with ForexClear, and RepoClear) Jun 2022 - Aug 2022

- Incorporated edge-case detection for trade rollovers on holidays
- Tested trade settlement behaviour within larger Java applications using both JUnit and Cucumber tests
- Utilised a BDD testing framework to incorporate these trade settlement tests
- Constructed a GUI using macros and VBA within Excel to automate data input to internal databases
- Aided the production of a machine learning model to predict trade failure utilising the XGBoost library
- Supported the initial migration to AWS CloudFormation, debugging and deploying the initial stacks
- Liased amongst departments and supported a pitch to initialise BDD testing amongst RepoClear development teams

**Ditchley Foundation** (Network Analysis Intern) Jul 2021 - Aug 2021

- Queried and analysed a neo4j graph database (~ 110K nodes) using Cypher Query Language alongside Python
- Drew out trends and within the database of people and presented them visually alongside my team
- Began topic modelling using on call notes within the database using the Gensim and NLTK libraries
- Conducted research into themes and roles of key figures for potential Ditchley Conferences

**OxFizz** (Widening Participation Intern) Aug 2020

- Created a month long research report on barriers for disadvantaged Oxbridge applicants with 2 other interns
- Conducted research through provider interviews and student questionnaires distributed to ~ 500 students
- Investigated existing access provisioning and identified lacks therein, presenting these gaps graphically
- Provided recommendations for future access support programmes, bearing in mind resource constraints
- Outlined and began development of a long-term student roadmap resource for Oxbridge applications
